```
//
// MG: Min Guarantee (what the VM is entitled to (e.g., paid for))
// SR: Send rate as measured since the last macro-scheduler iteration
// TR: The computed Target Rate for this iteration.
//     This is the max-cap value it is desired to give to this VM if the link has enough residual bandwidth
// AR: Current allocated rate (The allocated max-cap queue rate by the macro-scheduler in the previous iteration)
// RUStage: Ramp-up counter to track how much additional bandwidth to allocate to a VM.
// TempRate
//
    residualBandwidth = lineRate;
    totalNeedsMoreWeight = 0;
```
